Valeo Pyeong Hwa International Co., Ltd.

ONE-STOP SOLUTION FOR AFTERMARKET

VPHI provides a ONE-STOP solution that allows you to purchase more than 40 different product groups at once. Through this, customers can handle various high-quality parts at once, reduce logistics costs and increase work efficiency. Please check out our range on our website. (www.koreavaleo.com)

Clutch Parts

Brake Parts

Suspension Parts

Engine Parts

Filter, Wiper

Oil, Cable, Mounting & Bushing

Your safety and driving pleasure with PHC Valeo

Web – Catalog service

Save your time and find right parts.

The PHC Valeo Online Catalog offers flexible searching by vehicle, OEM number and reference number. It also provides product description (Size, Type..) and photos. Experience our powerful catalog tool and find your parts.

* Language : English, Korean, Chinese

One stop repair solutions

Meet PHC Valeo Clutch KIT

When you replace the clutch, it is very important to use components from the same manufacturer. Because If you use a combination of components from different manufacturers, quality problems may happen. PHC Valeo offers a wide range of Clutch KITs. The individual components are perfectly matched to ensure optimum functionality of the vehicle after repair.

2 pieces KIT : Disc + Cover

3 pieces KIT : Disc + Cover + Bearing or CSC

4 pieces KIT : Disc + Cover + Bearing or CSC + Flywheel

The High quality Flywheels

The technology that can only be produced by PHC Valeo

The name of the DMF (dual mass flywheel) was given by dividing the mass in an SMF (single mass flywheel) into two parts. One mass of the DMF is connected to the engine crank shaft and belongs to the mass moment of inertia of the engine. The other mass is connected to the transmission and belongs to the mass moment of inertia of the transmission.

The DMF has a larger mass moment of inertia than a conventional SMF. Between the two masses is a coil spring and a damping system, which also connects the two masses. The DMF provides driving comfort by improving rattle and booming noise to a great extent throughout the entire range of driving.

Flexible flywheel is the technology designed to reduce the accelerator vibration of the engine. It's main effect is to improve the shift feeling, reduction of the engine noise, reduction of the crankshaft and the inputshaft bending. it also improves the system reliability by rearranging clutch.

Dual Mass Flywheel

Pendulum Dual Mass Flywheel

Direct Damper Flywheel

C-Dual Mass Flywheel

Dual Mass Damper

Single Mass Flywheel

Flywheel

DMF : Dual Mass flywheel

SMF : Single Mass Flywheel

DDC ED : Dry Double Clutch External Damper
